

Great Eastern Shipping Enhances Efficiency and Sustainability with StormGeo Implementation

Oslo, August 8, 2024 – [The Great Eastern Shipping Company Limited \(G E Shipping\)](#) announces the successful deployment of StormGeo's advanced technology solutions across its entire fleet.

[StormGeo](#), a leading technology provider and pioneer in weather intelligence, has announced a strategic partnership with India's largest private sector shipping company, The Great Eastern Shipping Company Ltd.

This collaboration aims to enhance the operational efficiency and environmental performance for G E Shipping's fleet by using StormGeo's complete s-Insight solution, which provides clients with tools to optimize the commercial, technical and environmental performance of their entire fleet.

The completion of vessel data is set for October 2023. As of January 2024, all 43 of G E Shipping's fleets will leverage StormGeo's suite of solutions, including the s-Log data reporting tool and s-Insight Environmental Performance platform. These tools provide comprehensive insights into EU MRV, IMO DCS & CII compliance, technical performance, commercial efficiency, and fuel performance monitoring.

In a considerable move, the company has now fully transitioned to StormGeo's solution for all reporting and emission data validation. This decision reflects The Great Eastern Shipping Company's commitment to data quality and addressing emission compliance challenges.

Mr. Ankush Gupta, Chief Operating Officer of Great Eastern Shipping, highlights the importance of StormGeo's technology in today's evolving regulatory landscape. "In this dynamic regulatory environment, having technology that facilitates swift data transfer for decarbonization reporting and compliance with regulations like IMO-DCS, EUMRV, and FuelEU Maritime is paramount," he states. "Furthermore, StormGeo's solutions, including weather routing and voyage optimization, significantly enhance our ability to conduct safe, competitive, and low-carbon voyages. This comprehensive suite of solutions empowers us to thrive in the highly competitive shipping industry."

Speaking on the collaboration, Petter Andersen, SVP Shipping, StormGeo said: "Our collaboration with The Great Eastern Shipping Company represents a milestone in maritime digitalization. By using StormGeo's advanced analytics and environmental intelligence, The Great Eastern Shipping Company is well-positioned to optimize operations, reduce emissions, and drive sustainable growth."

StormGeo sees significant growth opportunities in the Indian market and this partnership also aligns with the intent to expand its local presence there.

StormGeo is a leading technology provider enabling weather-sensitive companies to navigate operational challenges in dynamic environments and volatile markets. With nature and weather intelligence at its core, StormGeo's technological innovations and human expertise transform data into actions that safeguard people, industries, and nature for a sustainable future. StormGeo is part of Alfa Laval. For more information, visit stormgeo.com.
